## PROGRAMMING

### LANGUAGES

Python • C++ • SQL • Bash

### TOOLS

vLLM • PyTorch  
LangGraph • PydanticAI  
Airflow • Apache Spark  
BigQuery • Firestore  
Kafka • Pub/Sub • Protobuf  
Kubernetes • Docker • Terraform  
GCP • AWS • Azure

## EDUCATION

### ETH ZURICH

#### MSC INTEGRATED BUILDING SYSTEMS

Excellence Scholarship &  
Opportunity Programme (ESOP)  
Oct 2018 | Zurich, Switzerland

#### AUTOMATIC CONTROL LAB

Thesis: [Humans in the Loop](#)  
Grade: 5.75/6.0  
Online learning from human  
feedback in model predictive  
control.

### UNIVERSITY OF WATERLOO

#### BASC HONOURS CIVIL ENGINEERING

Merit Scholarship  
Jun 2016 | Waterloo, Canada

## COURSEWORK

### GRADUATE

Model Predictive Control  
Mathematical Optimization  
Computational Physics  
Building Control and Automation  
Computational Fluid Dynamics  
Technology and Innovation  
Management  
Innovation Leadership  
Social Networks Research

### UNDERGRADUATE

Software Engineering Design Project  
Advanced Calculus  
Probability and Statistics  
Linear Algebra

## EXPERIENCE

### TENSTORRENT

Apr 2023 – present (3 years, 5 month) | Toronto, Canada

#### Senior Manager, Forward Deployed Engineering

Jul 2026 – present

- Implemented pre/post-sales life cycle processes for customers deploying AI inference clusters across 7+ teams and 5 geographies. Built agentic system using LangGraph to coordinate delivery and compute resource scheduling for demo, proof of concept, and production deployments.
- Architected customer kubernetes clusters for AI inference serving and development using tt-operator, ansible, helm, and [cloud native tooling](#).

#### Senior Staff Engineer, Field Applications - Machine Learning

Sep 2024 – Jul 2026

- [tt-inference-server](#): co-led cross-functional team of 20+ engineers delivering tt-inference-server, an open-source inference server deployment and benchmarking framework for Tenstorrent AI accelerators.
- Designed CI test and release system for inference serving stack with automated regression detection. 18 releases completed, 60+ AI models supported (27 LLMs/VLMs) across 9 different hardware configurations.
- Partnered with enterprise customers to define AI system requirements for agentic application integration with Tenstorrent hardware. Customer-specific optimization of LLM inference for latency/throughput/cost via hardware configuration, batch size, parallelism.

#### Staff Engineer, Field Applications - Machine Learning

Apr 2023 – Sep 2024

- Prototyped cloud deployments of vLLM with LLMs running on Tenstorrent ASICs. using Docker, AWS EKS, ELB, Azure API Gateway, and Terraform.
- [tt-studio](#): Built backend for open-source customer reference AI applications using Docker, Django, LangChain and self-hosting LLM inference APIs.
- [tt-buda-benchmarks](#): benchmarking and evaluations for LLM and CNN models to track model performance and accuracy across AI compiler releases.

### BCG X

May 2022 – Apr 2023 (1 year) | Toronto, Canada

#### Senior AI Software Engineer

May 2022 – Apr 2023

- Led production engineering for petabyte-scale pricing optimization models on Databricks Lakehouse. Internal ETL library enhancements, CI/CD and release process integration with secure artifactory.
- Led MLOps for time-series XGBoost pricing model lifecycle management: ETL, training, validation, and deployment in production, monitoring, on-call. Using Airflow, Apache Spark, and BigQuery in GCP.

### ECOBEE

Oct 2018 – May 2022 (3 years, 8 months) | Toronto, Canada

#### Senior Data Scientist

Jun 2021 – May 2022

- Inventor of US patent [US12241649B2](#) in hybrid edge ML Model Predictive Control system for HVAC, optimizing energy cost over forecasted energy price, weather, and occupancy. Implemented real-world system and conducted experiments in embedded C++ using trained autoregressive state-space models.
- [building-controls-simulator](#): developed open source HVAC controls digital-twin platform. Physics models automatically fit and tuned using real sensor data. Presented at eSim2020 conference.

#### Data Scientist

Oct 2018 – Jun 2021

- Scaled from 0 to 150k+ devices IoT experimentation and telemetry platform running parameterized experiments. Deployed in GCP and on embedded devices using C++, Protobuf, Pub/Sub, Big Query, and Firestore.
